RADAR-DETECTOR TEST & BUYER'S GUIDE

Radar Detector Test and Buyer's Guide

Remote Radar/LIDAR Detectors

One out of five dashtop detectors are stolen each year, and although legal in all states except Virginia, detectors are not covered under most comprehensive and homeowners insurance policies. In addition, with some insurance companies will not insure drivers using detectors. Remotes, while still not insurable, are stealth and not only more difficult to steal, but are far less antagonistic to members of the law enforcement community. It should be noted that since their antenna units are mounted lower than is typical for dashtop units, their overall range will be less than their dashtop counterparts.

K40 Undetectable Model 2000 with Single Laser Defuser Plus

Sold through authorized specialist mobile electronics retailers and through selected new car dealers, the K40 is a very unique package. As tested, it consists of the model 2000 remote radar detector with separate front and rear antennas, used in conjunction with two separate S500 Plus LIDAR detectors and diffusers built into a license plate frame. Together they offer outstanding performance.

Price: \$1600 Installed

CALL: 800/323-6768

WHAT'S HOT	- Dual front and rear radar antenna; true custom in-dash installation and mounting with front and rear laser diffusion
WHAT'S NOT	- Installation intensive, requires professional assistance.
BOTTOM LINE	- Offers the highest level of protection as equipped with its rear mounted radar antenna.
