IGNITION AND GROUND

1. Use a test meter to locate an ignition on source for the Interior Network Module with +12 volts when ignition key is both on and cranking.

2. Connect the black wire to a solid chassis ground using the provided ring terminal and silver self-tapping screw.

3. Radar receivers may be connected to either a +12 volt ignition on source or +12 volt constant battery source.
IGNITION AND GROUND

1. Use a test meter to locate an ignition on source for the Interior Network Module with +12 volts when ignition key is both on and cranking.

2. Connect the black wire to a solid chassis ground using the provided ring terminal and silver self-tapping screw.

3. Radar receivers may be connected to either a +12 volt ignition on source or +12 volt constant battery source.

*NOTE: THE RED WIRE SHOULD BE CONNECTED TO A MINIMUM 16 GAUGE +12 VOLT IGNITION WIRE.

*THE YELLOW AND BROWN RADAR RECEIVER WIRES ARE USED TO CONNECT TO THE OPTIONAL LASER DEFUSER(S). IF A LASER DEFUSER IS NOT BEING INSTALLED WITH A RADAR RECEIVER (FRONT AND/OR REAR), THE YELLOW AND BROWN WIRES WILL NOT BE USED.
